

Welding with zSpace

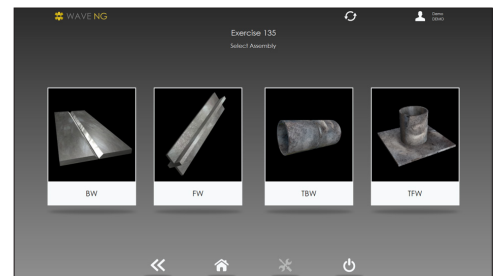

Master welding gestures with Wave NG by Mimbus

Using zSpace, Wave NG by Mimbus provides students with hands-on training in welding gestures, MAG and MMA, through a series of exercises performed with a handheld welding simulator. Students receive multisensory training, allowing them to weld from multiple angles using their eyes, ears, and hands to master the fundamentals of welding.

Compared to traditional welding training, students using Wave NG experience less equipment breakage and wear, as well as less risk of injury. When welding students learn with zSpace, there is a 50% decrease in time needed to complete training and schools realize a savings of up to 30% of consumable costs.

Features

- Realistic gestures using passive electrode handles or torches
- Train on 30cm long workpieces
- In-depth tracking and analysis of angles, speed, and arc length
- An environmentally-friendly and safe experience
- Track and adapt student learning path using VULCAN
